Appendix 2. Question samples

AGRIBUSINESS IDEOLOGY

Agriculture is not only an economic activity to generate income for farmers. More than that, agriculture is a way of life for most farmers in Indonesia. Agribusiness ideology is indeed considered more modern and more efficient because it is more market-oriented, not only on "commodities that can be produced by farmers". The change from "agriculture" to agribusiness means that all agricultural production efforts are aimed at making profits, not just meeting their own needs, including small or subsistence agriculture. The use of any means of production is to produce "production", including the use of family labour, and all must be carefully calculated and combined to achieve the highest efficiency. The agribusiness paradigm does promise a significant change in welfare for farmers. However, if we examine it more deeply, there are some fundamental corrections to the paradigm that is the direction of the Ministry of Agriculture's policy.

The main assumption of the agribusiness paradigm that all our agricultural activities are profit oriented is very misleading. There are still very many of our farmers who live subsistencely, by consuming agricultural commodities that they produce themselves. They are farmers whose land area and fields are very small, or farm laborers who receive wages in the form of food, such as rice, corn, or cassava. Seeking profit is natural in agricultural business, but it cannot be used as an orientation in every business activity of farmers. Our farmers generally prioritize social-community orientation, which is manifested by the tradition of gotong royong (splice/kerigan) in their activities. As at the beginning of the article, farming is not only an economic activity, but has become a living culture that is full of socio-cultural values of the local community. So that planning for changes in agricultural activities must also consider the concept and impact of socio-cultural changes that will occur. Not all agricultural activities on a small scale farmer scale can be made into business, as is done by large (company) farmers abroad, who have large lands and different value systems/cultures from our farmers.

The Indonesian economic system that refers to Pancasila, namely the Pancasila Economic System is a market economic system that favors efforts to realize social justice for all Indonesian people. Although sustainable agriculture can already include efforts to achieve justice, moralistic, humane, nationalism, and democracy/'populist' guidelines as a whole are not easy to integrate in a sustainable sense. The whole Pancasila principle combines the 5 principles of

Pancasila more firmly in directing policies that favor the development of people's agriculture, people's plantations, people's livestock, or people's fisheries. Agriculture that refers to or has a Pancasila perspective must be in favor of policies that lead concretely to poverty reduction programs in agriculture and increasing farmers' welfare (Mubyarto and Awan Santosa, 2011).

QUESTION:

- 1. Based on the article above
- a. Explain what is the difference between "agriculture" and "agribusiness" and why agriculture needs to be managed with the concept of agribusiness? (value 10)
- b. If it is related to the Pancasila economic system in Indonesia and based on the facts on the ground, is the application of the agribusiness concept as expected? Explain your reason! (value 10)
- c. Explain the author's criticism of the application of the concept of agribusiness in Indonesia! (value 10)
- 2. Explain with pictures, understanding and scope of the agribusiness system and the role of each subsystem in it! (value 30).
- 3. Explain the meaning of agro-industry and how is the relationship between agro-industry and the agricultural sector? (value 20)
- 4. Explain the difference between the marketing of agricultural and non-agricultural products and the problems/constraints in the marketing of agricultural products! (value 10).
- 5. Agricultural products have unique properties that require a different approach to non-agricultural products. Explain the uniqueness and what are the consequences of the uniqueness! (value 10)
